2021

Javascript Developer

Capgemini

- Define evolutive data models - creating the app's database
- Define business workflows - passing and transforming data between various stages of the business process
- Define validation and security access rules
- Map out the user journeys - building out the app's Web digital journey and its custom logic
- Insert and configure a variety of interface components, putting them together in HTML and styling them with CSS (Bootstrap)
- Integrate data automation processors (OCR, face recognition, video conferencing, digital signatures, etc.) for more complex steps in the user journeys
- Configure and interact with decision engines (scoring & personalization)
- Use JavaScript for advanced mathematical, logical and data manipulation tasks
